DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to "a reset circuit for an integrated amplifier", classified in class 324, subclass 123C.
 - II. Claims 17-28, drawn to "a process for measuring an electrical current", classified in class 324, subclass 123C.
 - III. Claims 29-42, drawn to "an integrated electrometer and rapid reset circuit", classified in class 324, subclass 458.
 - IV. Claims 43-61, drawn to "an instrument and process for characterizing aerosols", classified in class 324, subclass 444.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions group II and groups I & III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the current measuring process of the invention of group II does not require a comparator circuitry as set forth in the invention of group I.

Art Unit: 2858

3. Inventions group IV and groups I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group IV has separate utility such as an instrument for characterizing particle concentration in aerosols; however the inventions of groups I and III are amplifier circuits that can be used for a high voltage supply. See MPEP § 806.05(d).

4. Inventions group I and group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention of group III does not require the first comparator circuitry. The subcombination has separate utility such as reset circuit for a high voltage supply.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, III, or IV, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Niebuhr, Frederick on 7/12/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marina Kramskaya whose telephone number is (571)272-2146. The examiner can normally be reached on M-F 7:00-4:00.
